

Modul-System Launches Electric Heater for Commercial Vehicles

July 11, 2024

Mölnadal, Sweden – Modul-System, one of the global leaders in van racking and equipment for commercial vehicles, announces the launch of its new electrical heater, designed to redefine comfort and convenience for van users. The e-Heater comes in two powerful versions, offering 1000W and 2000W options to cater to diverse heating needs

What sets the e-Heater apart is its seamless integration with Modul-System's cutting-edge technologies, Modul-Connect®. When connected to Modul-Connect®, the e-Heater can be easily controlled via the app, allowing users to turn it on from anywhere thanks to its cloud-based functionality. This ensures that your van is warm and welcoming before you even step inside.

The 2000W version of the e-Heater offers even more flexibility with two separately controlled outlets. These outlets can be installed in different areas of the van, such as one in the cabin and one in the load area, allowing for customised heating zones to maximise comfort.

Unlike traditional heaters, the e-Heater operates with zero exhaust emissions, offering an eco-friendly alternative that ensures clean and efficient heating.

"Our e-Heater aligns with the increasing adoption of electric vehicles and forthcoming regulations restricting combustion engine vehicles in urban areas," explained Thomas Johansson, Vice President of Modul-System. "The heater not only improves comfort but also reinforces our commitment, alongside our customers', to sustainability by offering van users a practical, eco-friendly heating option."

About Modul-System

Modul-System is dedicated to enhancing functionality and efficiency for its customers. With a commitment to innovation and sustainability, Modul-System delivers high-quality products that meet the evolving needs of its customers.
